

# July 15th, in Namur

On this 15 July 2021, Belgium had to deal with heavy flooding throughout the country. Debris is found in the Meuse, this will certainly end up in the ocean.

Water floods the sidewalks, and soon enters the houses. On this July 15th 2021, Belgium receives a warning, a foretaste of the consequences of global warming.

This day is historic. Belgium is now affected by climate change.

Last picture: In a paddle, a flower faces fate and embodies the hope for a better world.
